Lockheed Martin

To Whom It May Concern,

I am pleased to be a reference for Rodolfo Parra. I had the pleasure of having Rodolfo as part of the Image Creation Dev Ops team and was his onboarding point of contact during his internship in 2023. This team managed all of the Lockheed Martin OS images (Cloud and On-prem).

During the time I worked with Rodolfo, his networking and computer skill set knowledge grew at an exponential rate. His responsibilities included developing, troubleshooting, contributing and supporting multiple Windows and Linux O/S images. This led him becoming part of the team's discussions of purpose-built O/S configurations. Rodolfo has a solid understanding of scripting, TCP/IP networks and virtualization environments. He is a self-motivated and highly productive individual. He takes the initiative to get results that makes a positive impact on end user productivity. His technical aptitude enables him to perform complex analytical tasks, problem resolution and provide end support to users across a variety of disciplines. He works very well both independently and in team settings.

Finally, one of Rodolfo's greatest strengths is his interpersonal skills and being a reliable team player that constantly seeks to improve his skills and help others whenever he can. I am highly confident that Rodolfo will be a great asset for any team, project or company. If you would like to inquire further about my experience working with Rodolfo, please contact me at the email address below and I will be happy to follow-up.

Sincerely,

Richard W. Pacheco
